

Redus Universal

Universal gear grease

Description

Universal grease is intended for gearboxes and internal moving parts of power tools, garden equipment and other mechanisms, equipment that works at high loads and temperatures.

Due to the EP-class additives effectively lubricates the surface, provides high antiwear and anti-corrosion properties. Provides long-term protection against water washing out and overheating of moving parts.

Each tube is equipped with a removable nose-applicator for convenient apply.

Enabled packing

■ Tube 100g

Benefits

- Reduces wear in high temperature and vibration;
- Mechanical and antioxidant stability;
- Excellent lubrication and low evaporation;
- Protection against rust and corrosion;
- Resistance to water washout.

Compliance

NLGI 1 | EP | DIN 51502: K3K-40 | ISO 6743-9: L-XDCHA3 |

Typical characteristics

Efficient viscosity at -20 °C, Pa • s-1, not more then	600
Penetration at 25°C, mm•10-1	310-340
Dropping Point, °C	180
Corrosion impact	stands
Colloid stability, %	18
Evaporation, not more then	2
Welding load, N, min	2450

Temperature range

Produced according to TC U 20.5-31852954-100:2018. This information is a reference and can be changed without notice.
